MANUFACTURING FABRICATIONS TO THE HIGHEST QUALITY STANDARDS

About us

Chinn Engineering Limited operates at the forefront of the design and production of precision fabrications and has a 45 year history of providing the highest quality products from the highly skilled team. Our experience in fabrication techniques includes the capability to work with all carbon steels plus aluminium alloys, titanium and stainless steel to produce specialised or

Engineering

Chinn Engineering is able to develop our customers' requirements through the skills of our engineers to achieve an optimised design solution that meets performance, manufacturability, cost and all other criteria of the specification. We offer advice to customers in producing complex fabrications in a variety of materials from initial design to final completion with emphasis on quality. Chinn Engineering is also able to offer full turnkey packages which can include design or design for manufacture, prototype, development, experimental and simulator products, leading to the production stage.

Manufacturing

Chinn Engineering has a wide range of manufacturing capabilities supported by a highly skilled and fully flexible workforce. Fabrications can be produced up to 10 tonne single lift weight and 10m x 6m x 4m envelop. Customer site installation, welding and assembly is also undertaken where this is required. In addition full NDT and MPI facilities that include proof loading to a maximum of 30 tonne are available.

repeat products that match our customers needs. Industry and customer approvals are held and these and our engineering skills are constantly reviewed and developed to keep pace with evolving technology and satisfy customer requirements.

RDs DEPENDED UPON BY THE INDUSTRIES WE SERVE

Chinn Engineering has developed a long standing relationship with many customers such as BAE Land Systems, for example supplying major components and spares for the 105mm Light Gun.

Mechanical Assembly

Chinn Engineering is able to provide assembly and testing of a wide variety of fabricated, machined and assembled components from a detailed sub assembly stage, through to final build and complete programs.

Project Management

In today's demanding market Chinn Engineering utilises the latest project management tools and techniques to fully satisfy project and programme requirement. We see this as a major factor in being able to identify key activities and satisfy customer requirements that projects are carefully controlled with, normally a single point of contact to ensure optimum communications at any time.

Personnel and Environment

Chinn Engineering has a highly skilled, flexible and dedicated workforce including accredited welders / fabricators trained and assessed to "industry best" standards. We are committed to maintaining and developing our environmental standards and have been ISO 14001 approved since 2000.

Group Facilities

In addition to in-house facilities, Chinn Engineering has ready access to the full capabilities of the Nasmyth Group. In particular those of Chinn Limited which include additional welding, fabrication, machining and surface treatments, with which Chinn Engineering is co-located.

Markets

Loyal blue chip customers in the following sectors: satellite, defence, nuclear, aerospace, marine, gas turbine, missile and rail transportation.

Location

The company is centrally located within the UK and our location is convenient for access for the Midlands motorway network, rail and airport terminals.

Future

Chinn Engineering constantly seeks to improve and adapt to customers changing requirements and is consistently an industry leader with respect to quality, responsiveness, lead times and cost. Chinn Engineering takes great pride in the relationships we build with customers, in understanding their needs and requirements.
